Projects

Nitin.dev See live

Discover my portfolio at Nitin.dev—a unique web app featuring all my key projects. It's user-friendly, providing easy navigation while offering in-depth details about each project. Check it out to explore my journey as a developer .

- Nitin.dev runs on React, making it super quick and easy to explore. React keeps things smooth and interactive.
- Nitin.dev optimizes user navigation using the React-Scroll library, creating a seamless scrolling experience. This not only simplifies exploration but adds an extra layer of user-friendly magic to the journey through my projects.

AnimeX See live

AnimeX is a cool anime website I made using React. It's packed with awesome features, creating a fun space for anime lovers to explore and enjoy their favorite shows.

- While the site is packed with cool features, it's not fully responsive at the moment. I'm actively working to make it more user-friendly and enhance its overall performance.
- AnimeX uses the Axios library to fetch API data, ensuring seamless integration of real-time information for a more dynamic anime-watching experience.

Amazon See live

Crafted with HTML, CSS, and JavaScript, my Amazon Shopping Cart project is in progress, with a specific focus on refining the cart functionality for a seamless and engaging online shopping experience.

- Currently perfecting the shopping cart to make your online shopping experience effortless and enjoyable.
- Navigate through distinct sections, catering to both men and women, simplifying the exploration of products based on preferences.

Quiz See live

Introducing Quiz Master, my interactive quiz app built with HTML, CSS, and JavaScript. Currently featuring five quizzes, it serves as an engaging platform to test and expand your knowledge.

- Receive instant scores after each quiz, and ensure active participation by requiring an answer before progressing to the next question.
- Try out 5 different quizzes for now . Soon you can add your own questions, making it even more fun and personalized.
